

Brachytherapy – High Dose Rate (HDR) vs Low Dose Rate (LDR)

A case for High Dose Rate (HDR)/non-permanent seed implant vs Low Dose Rate (LDR)/permanent seed implant for patients considering Brachytherapy treatment for Prostate Cancer.

The following provides a comprehensive explanation supporting Prostate Cancer treatment with Brachytherapy - either High Dose Rate (HDR) non-permanent seed radiation, or Low Dose Rate (LDR) permanent seed implant radiation.

“Basic and Advanced Techniques in Prostate Brachytherapy”

Information in the following provides a comprehensive explanation of Brachytherapy in general, however, for comparison of HDR vs LDR, please open and scroll down to page 108, “Treatment Options,” for an explanation.
