

## "Principles for Managing Advanced Prostate Cancer"

In addition to the information below, additional information for those diagnosed with advanced/high grade prostate cancer (Gleason Score 4+3, 4+4, 4+5, 5+4, and 5+5) can be reviewed here: <http://tinyurl.com/3s76t6x>

Below is a compilation of information by a team of patients, caregivers, and physicians assembled by Us TOO Intl., Inc., an Education and Support Network for men diagnosed with prostate cancer, their caregivers, and physicians who provide prostate cancer treatment

See:

<http://www.ustoo.org/PDFs/principlesbrochure.pdf>

It is VERY IMPORTANT that patients and caregivers educate themselves to have reasonable knowledge of their personal prostate cancer status in order to be a partner with their physician in developing the most appropriate strategy of treatment for that status. These “Principles of Managing Advance Prostate Cancer” provided by Us TOO for men to manage “advanced” prostate cancer is just as important for every man diagnosed with prostate cancer to follow to better understand and manage his own disease no matter what level that disease may have progressed.

There are some excellent charts provided to help keep track of one's diagnostics to better be aware of day-to-day status.

I highly recommend every man diagnosed with prostate cancer not take this important paper lightly but rather avail himself of the information within to better understand and keep track of his status.

(Charles/Chuck Maack – Prostate Cancer Activist)
